Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guo US 6,596,599, in view of Rudeck et al. US 6,803,624.

Guo discloses a process of forming an LDD device and the LDD device including forming a gate insulating film and a gate electrode film, patterning the gate electrode, undercutting the region beneath the gate electrode, and forming oxide side wall spacers on the gate structure, and forming source and drain regions, wherein the gate has a silicon film, a refractory metal film and nitride film, also disclosed is forming a nitride spacer on the oxide spacer and implanting (see figs. 2-12 and related text).

Guo however does not disclose forming the oxide spacer by using a silicon layer and oxidizing the silicon layer to form the spacer.

Rudeck et al. teaches forming silicon layer (52) which can be oxidized to form a sidewall spacer in an LDD device.

Therefore it would have been obvious to one of ordinary skill in the art to use the spacer of Rudeck et al. in the method of Guo, because it allows for control of formation of the spacer.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
